

Kinetic Evolution: Q2 2026 Transparency & Progress Report

At **Aleph Strategy**, our focus remains resolute: building the deterministic, compliance-first infrastructure required for the emerging Agentic Economy.

Following our Q1 foundation ("Building the Safety Bridge"), the second quarter of 2026 was defined by operational scaling, high-level institutional engagement, and the translation of our regulatory-first architecture into live market conditions.

Here is a summary of our progress, key milestones, and technical maturation in Q2 2026.

1. Regulatory Alignment: FinLab, DORA, & EU AI Act

Building on our engagements in Q1, our structured dialogue with Portuguese financial authorities advanced significantly:

- **Banco de Portugal:** Guidance received this quarter aligned directly with our core positioning and non-custodial operational thesis.
- **CMVM Dialogue:** Conversations continued regarding technological innovation in FinTech, focusing on how Nutcracker™ can facilitate a safe transition to agentic rails under national interest and wider EU framework goals.

- **Compliance-by-Design:** With the enforcement of the EU AI Act and DORA mandates, Nutcracker's perimeter substrate is explicitly engineered to act as an automated compliance-by-design firewall for financial entities entering agentic workflows.

2. Global Institutional Engagement & Consortium Formation

In Q2, Aleph Strategy stepped onto the global stage at premier institutional venues, including the **Point Zero Forum** in Zurich.

- Active discussions were conducted with central bankers, global policymakers, institutional custodians, trading venues, and market infrastructure leaders.
- Several preliminary agreements have transitioned into active, confidential NDA phases aimed at forming an **Institutional PoC Consortium**.
- Looking ahead, these engagements will continue at upcoming global benchmarks including **Sibos** and the **Singapore FinTech Festival (SFF)**.

3. Pilot Program Execution & Market Resilience

Our closed Pilot Program delivered robust performance metrics, testing the Nutcracker™ engine against broader digital asset market headwinds and macroeconomic volatility:

- **System Resilience:** In volatile and declining market conditions, the engine demonstrated that cross-asset correlation efficiency outweighs broader directional trends.
- **Performance Metrics:** Across 30-day lookback windows, the backend architecture achieved annualized realized ROIC figures reaching **147%**, with annualized asset turnover rates up to **33x**, proving the efficacy of continuous, deterministic capital allocation.

4. Technical Stack & Agentic Schema Maturation

We achieved significant milestones in hardcoding risk and account life-cycles directly into technical infrastructure:

- **Full Account Life-Cycle Mapping:** The open-standard `agent-schema.json` was expanded to cover the complete execution perimeter and account lifecycle.
- **Architecture Update:** Our GitHub repositories were updated to integrate refined agent-schema workflows alongside FastAPI orchestration. This ensures seamless, isolated communication between the client's risk perimeter and our non-discretionary backend execution loops.
- **TRL7 Maturity:** The core SaaS architecture has formally reached **Technology Readiness Level 7 (TRL7)**, ready for enterprise-grade validation. Public diagnostic tools remain accessible via nutcrackerbot.com.

5. Theoretical Leadership: The Jevons Paradox of Capital Liquidity

Our core economic thesis—*The Jevons Paradox of Capital Liquidity (JPCL)*—reached an important milestone after successfully undergoing peer review.

- Following formal publication inquiries from a leading North American academic journal, the strategic decision was made to keep the research paper permanently open-access on **SSRN** to maintain frictionless public domain utility for the broader institutional community.

6. Corporate Governance & Delaware Umbrella

To support long-term institutional partnerships and secure our IP foundation under a recognized global jurisdiction:

- Aleph Strategy finalized its corporate umbrella structure in the United States via a **Delaware C-Corp**.
- All core Intellectual Property assets are now fully secured and governed within this structure, providing a clean legal container for institutional co-development and future funding rounds.

Strategic Outlook for Q3

With our technical stack at TRL7 and our corporate and regulatory frameworks fully established, Q3 is focused on **business development and commercial springboard**. Our primary vector is converting active institutional dialogues into formal PoC partnerships, securing co-development consortiums, and finalizing our strategic funding round to accelerate commercialization.

The shift toward autonomous, agentic finance is no longer theoretical—it requires an immutable, deterministic execution layer. Aleph Strategy is proud to provide the substrate.
